About the indicator: The risk and reward indicator illustrates the relationship between risk and potential returns from an investment in the fund. The indicator is based on how the fund's value has changed over the last five years.

The fund's investments: The fund belongs to category 6, which means a high risk of both increases and decreases in value. Category 1 does not mean the fund is a risk free investment. Over time the fund may shift to both the right and left on the indicator scale. This is because the indicator is based on historical data, which is not a guarantee of future risk and returns.

The equity market is generally characterized by high risk, but also the potential for high returns. Since a large proportion of

investments are made in currencies other than the Swedish krona, the fund is also exposed to currency risk that can both reduce and increase returns apart from changes in the price of the shares that the fund invest in.

Risk factors not shown through the indicator: The indicator reflects the fund's most important risks.
