

Risk information

Past returns are no guarantee of future returns. The money invested in the fund may increase or decrease in value and it is not certain that you will get back all the capital you have invested. The key investor information document and prospectus can be found at www.lannebofonder.se.

The fund's investment policy

Lannebo Sverige Plus is an actively managed equity fund that primarily invests in shares on the Swedish stock market. The fund is similar to a traditional equity fund, but with more flexible investment rules. The "Plus" label reflects the fund's ability to invest more than 100 per cent of the fund's assets. For example, the fund can invest 130 per cent in shares that the fund managers are positive about and balance this by reducing its equity exposure by 30 per cent through the sale of shares that the fund does not own, i.e. short selling.

The fund targets those who:

- want a Swedish equity fund with greater opportunities
- want an actively managed fund with investments based on a clear understanding of each individual company

Fund manager comment

During July the Stockholm Stock Exchange, SIXPRX, increased 5.5 per cent. The equity market continued to recover in the aftermath of the UK's EU referendum, where the driving force behind the increase seems to be the prolonged decline in interest rates. Central banks continue to ensure liquidity, signalling that interest rates will remain low for the foreseeable future. Therefore, investors need to venture further out on the risk curve in order to obtain returns, and accordingly the relative attractiveness of equities increases. The second half of the month was characterized by Q2 earnings reports. So far earnings results have been mixed and in many cases companies have indicated unchanged demand trends going forward.

The World Index (MSCI AC World) increased during the month by 4.2 per cent, and in the US the S&P 500 increased by 3.7 per cent. Euro STOXX 50 index decreased 4.6 per cent. Lannebo Sverige Plus increased by 6.3 per cent during the month.

Of the fund's holdings BillerudKorsnäs, Net Insight and StoraEnso performed significantly better than the overall market with price increases of 19, 18 and 15 per cent respectively. BillerudKorsnäs reported earnings in line with market expectations; the positive market reaction was due to information that the company's production problems seem to be over at the plant in Frövi. StoraEnso rebounded after a period of weak share price performance.

Tele2, Ericsson and Eltel performed significantly worse than the stock market as a whole where share prices were slightly lower compared with the end of last month. Ericsson announced that CEO Hans Vestberg

would leave with immediate effect following a longer period of weak earnings and negative media reports. Needless to say this contributes to increased uncertainty about the company's prospects, management and strategic choices going forward.

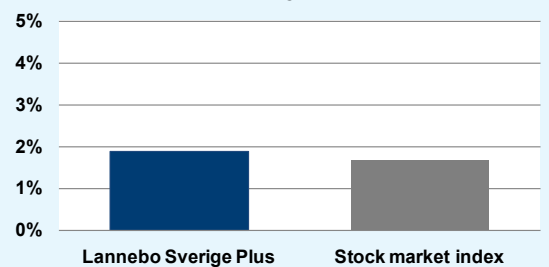

During the month the fund invested in Investor and increased the holdings in Electrolux and Trelleborg. The holdings in Atlas Copco, Sandvik and Tele2 were reduced.

A reduced risk appetite has recently characterized equity markets. Central banks' monetary policies have in part led to real economic improvements, but above all, consumption has been stimulated while corporate investments have remained limited. We find that the equity market is currently divided. Companies that can demonstrate stability, combined with some growth, are currently valued in a way that makes it very challenging to achieve returns over the medium term. However, the market's expectations are considerably more modest for companies that are experiencing weaker demand in the near term. In our judgment, this is also where we find the most interesting investments.

Performance for the month

Performance year-to-date

Performance, %	Lannebo Sverige Plus	Stock market index
July 2016	6.3	5.5
Year-to-date 2016	1.9	1.7
3 years	60.2	42.4
5 years	95.9	77.6
Since inception (12/11/2008)	281.8	221.2
Average annual return 24 months	11.6	9.4

Monthly performance, %

Jan	Feb	Mar	Apr	May	Jun
-8.5	4.6	2.3	2.9	1.5	-6.3
Jul	Aug	Sep	Oct	Nov	Dec
6.3					

Annual performance, %	Lannebo Sverige Plus*	Stock market index
2015	13.4	10.5
2014	23.4	15.9
2013	28.2	28.0
2012	17.3	16.7
2011	-18.9	-13.6

* The annual performance of the fund is calculated from the NAV per unit in the final accounts.

Explanations

Stock market index	SIX Portfolio Return Index. The unit price of the fund is set before the price of the index is calculated. This can sometimes result in a misleading comparison between the two.
Sharpe ratio	A measure of the fund's return taking into account the total risk the fund has had during the period. Calculated as the ratio between the fund's return minus the risk-free rate of return and the fund's total risk (standard deviation). The information is based on monthly data and relates to the latest 24 months.
Total risk	Given as the standard deviation of variations in the total return of the fund or index. The information is based on monthly data and relates to the latest 24 months.
Tracking error	A measure that describes how closely the performance of the fund tracks the performance of the benchmark index. Calculated as the standard deviation of the difference between the return on the fund and a benchmark index. The information is based on monthly data and relates to the latest 24 months.
Information ratio	A measure of risk-adjusted return. This is measured as the active return divided by the portfolio's active risk. The information is based on monthly data and relates to the latest 24 months.
Alpha	Describes the effect of the portfolio manager's decisions on the return of the fund. A positive alpha value is the extra return which an investor receives for having taken greater risks than the market. The information is based on monthly data and relates to the latest 24 months.
Beta	Describes the sensitivity of the fund's value to changes in the market's value. The beta value reports how much the fund's value changes in percentage terms when the market's value changes by one percentage point. The information is based on monthly data and relates to the latest 24 months.
Active share	A measure of the proportion of the portfolio that differ from the benchmark.
