

Risk information

Past returns are no guarantee of future returns. The money invested in the fund may increase or decrease in value and it is not certain that you will get back all the capital you have invested. The key investor information document and prospectus can be found at www.lannebofonder.se.

The fund's investment policy

Lannebo Sverige Plus is an actively managed equity fund that primarily invests in shares on the Swedish stock market. The fund is similar to a traditional equity fund, but with more flexible investment rules. The "Plus" label reflects the fund's ability to invest more than 100 per cent of the fund's assets. For example, the fund can invest 130 per cent in shares that the fund managers are positive about and balance this by reducing its equity exposure by 30 per cent through the sale of shares that the fund does not own, i.e. short selling.

The fund targets those who:

- want a Swedish equity fund with greater opportunities
- want an actively managed fund with investments based on a clear understanding of each individual company

Fund manager comment

The Stockholm Stock Exchange, SIXPRX, increased 2.5 per cent during August. In her recent speech at the Fed's annual monetary policy conference in Jackson Hole, Wyoming the head of the US central bank Janet Yellen said that the case for a rate hike during the Fall had increased. Macro data from the US and Europe was slightly better than expected. During the month SCA announced that it plans to split the company into two listed companies and spin off the hygiene business to shareholders. Handelsbanken divested its shares in Industrivärden during the month, and in so doing the bank's influence over a number of companies continued to decrease. It should also be noted that Getinge and Handelsbanken both appointed a new CEO during the month.

The World Index (MSCI AC World) increased during the month by 0.7 per cent, and in the US the S&P 500 increased by 0.1 per cent. Euro STOXX 50 index increased 1.2 per cent. Lannebo Sverige Plus increased by 1.9 per cent during the month.

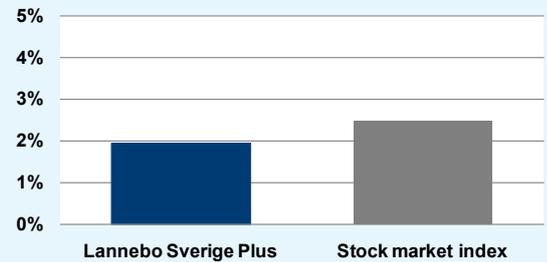

Holdings that performed significantly better than the overall market were SEB, Nordea and Swedbank with price increases of 12, 10 and 10 per cent, respectively. After a period of weak growth, bank shares rebounded during the month on hopes that global interest rates had bottomed out.

Ericsson, Net Insight and Eltel performed significantly worse than the overall market with share price declines of around 4 per cent. Eltel's share price was weak following the release of its quarterly earnings report which included a significant write-down of a project.

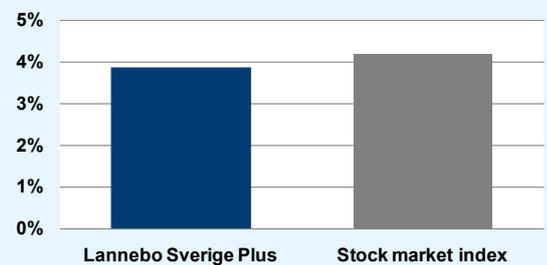

The holdings in Electrolux, Investor and Sandvik were slightly increased, while holdings in Ericsson and Handelsbanken were reduced.

A reduced risk appetite has recently characterized equity markets. Central banks' monetary policies have in part led to real economic improvements, but above all, consumption has been stimulated while corporate investments have remained limited. We find that the equity market is currently divided. Companies that can demonstrate stability, combined with some growth, are currently valued in a way that makes it very challenging to achieve returns over the medium term. However, the market's expectations are considerably more modest for companies that are experiencing weaker demand in the near term. In our judgment, this is also where we find the most interesting investments.

Performance for the month

Performance year-to-date

| Performance, % | Lannebo Sverige Plus | Stock market index |
|---------------------------------|----------------------|--------------------|
| August 2016 | 1.9 | 2.5 |
| Year-to-date 2016 | 3.9 | 4.2 |
| 3 years | 62.7 | 47.5 |
| 5 years | 124.3 | 103.3 |
| Since inception (12/11/2008) | 289.2 | 229.1 |
| Average annual return 24 months | 12.4 | 10.4 |

| Portfolio turnover ratio 06/30/2016 | 1.9 | |

Explanations

| | |
|---------------------------|--|
| Stock market index | SIX Portfolio Return Index. The unit price of the fund is set before the price of the index is calculated. This can sometimes result in a misleading comparison between the two. |
| Sharpe ratio | A measure of the fund's return taking into account the total risk the fund has had during the period. Calculated as the ratio between the fund's return minus the risk-free rate of return and the fund's total risk (standard deviation). The information is based on monthly data and relates to the latest 24 months. |
| Total risk | Given as the standard deviation of variations in the total return of the fund or index. The information is based on monthly data and relates to the latest 24 months. |
| Tracking error | A measure that describes how closely the performance of the fund tracks the performance of the benchmark index. Calculated as the standard deviation of the difference between the return on the fund and a benchmark index. The information is based on monthly data and relates to the latest 24 months. |
| Information ratio | A measure of risk-adjusted return. This is measured as the active return divided by the portfolio's active risk. The information is based on monthly data and relates to the latest 24 months. |
| Alpha | Describes the effect of the portfolio manager's decisions on the return of the fund. A positive alpha value is the extra return which an investor receives for having taken greater risks than the market. The information is based on monthly data and relates to the latest 24 months. |
| Beta | Describes the sensitivity of the fund's value to changes in the market's value. The beta value reports how much the fund's value changes in percentage terms when the market's value changes by one percentage point. The information is based on monthly data and relates to the latest 24 months. |
| Active share | A measure of the proportion of the portfolio that differ from the benchmark. |
