

#### Risk information

Past returns are no guarantee of future returns. The money invested in the fund may increase or decrease in value and it is not certain that you will get back all the capital you have invested. The key investor information document and prospectus can be found at [www.lannebofonder.se](http://www.lannebofonder.se).

#### The fund's investment policy

Lannebo Sverige Plus is an actively managed equity fund that primarily invests in shares on the Swedish stock market. The fund is similar to a traditional equity fund, but with more flexible investment rules. The "Plus" label reflects the fund's ability to invest more than 100 per cent of the fund's assets. For example, the fund can invest 130 per cent in shares that the fund managers are positive about and balance this by reducing its equity exposure by 30 per cent through the sale of shares that the fund does not own, i.e. short selling.

#### The fund targets those who:

- want a Swedish equity fund with greater opportunities
- want an actively managed fund with investments based on a clear understanding of each individual company

#### Fund manager comment

US macro statistics included some disappointments during the month. As a result, the market downward adjusted expectations for future interest rate hikes by the US Fed. The Japanese central bank was the most active by taking a number of new measures, including an expansion of the monetary base. On the corporate front, Deutsche Bank dominated the news flow, which also put pressure on bank shares in general. Deutsche Bank is at risk of substantial fines from US authorities in light of earlier banking activities.

The Stockholm Stock Exchange, measured as SIXPRX, increased 1.8 per cent in September. The World Index (MSCI AC World) increased during the same period by 0.3 per cent, and in the US the S&P 500 was unchanged. Euro STOXX 50 index decreased 0.6 per cent. Lannebo Sverige Plus increased by 0.4 per cent during the month.

Volvo, Swedish Orphan Biovitrum and SAAB were holdings that performed significantly better than the overall market with share price increases of 6, 5 and 5 per cent. In our judgment the price movements were not attributed to any specific corporate events.

H&M and Electrolux performed significantly worse than the equity market as a whole with share price declines of 7 and 4 per cent respectively. H&M shares have been weak due to the continued warm autumn weather, which puts pressure on clothing sales. Earnings, as per the quarterly report, were in line with the downward revision of expectations.

The holdings in SEB and Sandvik were slightly increased. The holding in Ericsson was reduced and all shares in BillerudKorsnäs were divested.

A reduced risk appetite has recently characterized equity markets. Central banks' monetary policies have in part led to real economic improvements, but above all, consumption has been stimulated while corporate investments have remained limited. We find that the equity market is currently divided. Companies that can demonstrate stability, combined with some growth, are currently valued in a way that makes it very challenging to achieve returns over the medium term. However, the market's expectations are considerably more modest for companies that are experiencing weaker demand in the near term. In our judgment, this is also where we find the most interesting investments.

#### Performance for the month

#### Performance year-to-date

Performance, %	Lannebo Sverige Plus	Stock market index
September 2016	0.4	1.8
Year-to-date 2016	4.3	6.0
3 years	53.0	44.2
5 years	148.0	120.0
Since inception (12/11/2008)	290.9	235.0
Average annual return 24 months	12.3	11.5

#### Monthly performance, %

Jan	Feb	Mar	Apr	May	Jun
-8.5	4.6	2.3	2.9	1.5	-6.3
Jul	Aug	Sep	Oct	Nov	Dec
6.3	1.9	0.4			

Annual performance, %	Lannebo Sverige Plus*	Stock market index
2015	13.4	10.5
2014	23.4	15.9
2013	28.2	28.0
2012	17.3	16.7
2011	-18.9	-13.6

\* The annual performance of the fund is calculated from the NAV per unit in the final accounts.

<b>Supervisory authority</b>	Finansinspektionen

### Explanations

<b>Stock market index</b>	SIX Portfolio Return Index. The unit price of the fund is set before the price of the index is calculated. This can sometimes result in a misleading comparison between the two.
<b>Sharpe ratio</b>	A measure of the fund's return taking into account the total risk the fund has had during the period. Calculated as the ratio between the fund's return minus the risk-free rate of return and the fund's total risk (standard deviation). The information is based on monthly data and relates to the latest 24 months.
<b>Total risk</b>	Given as the standard deviation of variations in the total return of the fund or index. The information is based on monthly data and relates to the latest 24 months.
<b>Tracking error</b>	A measure that describes how closely the performance of the fund tracks the performance of the benchmark index. Calculated as the standard deviation of the difference between the return on the fund and a benchmark index. The information is based on monthly data and relates to the latest 24 months.
<b>Information ratio</b>	A measure of risk-adjusted return. This is measured as the active return divided by the portfolio's active risk. The information is based on monthly data and relates to the latest 24 months.
<b>Alpha</b>	Describes the effect of the portfolio manager's decisions on the return of the fund. A positive alpha value is the extra return which an investor receives for having taken greater risks than the market. The information is based on monthly data and relates to the latest 24 months.
<b>Beta</b>	Describes the sensitivity of the fund's value to changes in the market's value. The beta value reports how much the fund's value changes in percentage terms when the market's value changes by one percentage point. The information is based on monthly data and relates to the latest 24 months.
<b>Active share</b>	A measure of the proportion of the portfolio that differ from the benchmark.
