

Risk information

Past returns are no guarantee of future returns. The money invested in the fund may increase or decrease in value and it is not certain that you will get back all the capital you have invested. The key investor information document and prospectus can be found at www.lannebofonder.se. Please note that Lannebo Fonder does not produce investment recommendations or other information recommending or suggesting an investment strategy. Information in this monthly report should not be seen as anything other than a statement of the fund's trading activities and holdings.

The fund's investment policy

Lannebo Sverige is an actively managed equity fund that invests in shares on the Swedish equity market.

The fund targets those who:

- want to take part in developments on the Swedish equity market
- want an actively managed fund with investments based on a clear understanding of each individual company

Fund manager comment

The Stockholm Stock Exchange closed on the minus side in June, following more than seven straight months of positive equity market trends. Corporate news flows were limited during the month. However, Hexagon reported that it has considered various options and that the company has discussed a sale with potential buyers. Macro statistics were mixed during the month but still supportive; the purchasing manager's index for the euro zone continued to clearly indicate expansion.

Lannebo Sverige decreased by 2.5 per cent during June, while the benchmark index SIXPRX decreased 2.0 per cent. The World Index (MSCI AC World) increased during the same period by 0.2 per cent, and in the US, the S&P 500 increased by 0.6 per cent. The Euro STOXX 50 index decreased by 2.9 per cent.

Volvo and Investor were holdings that performed better than the overall market with marginal share price gains of about 1 per cent.

Nobia, SAAB and Holmen performed worse than the overall market, with price declines of 10, 8 and 6 per cent, respectively. Shares in Saab and Holmen fell back following a strong share price performance earlier in the year; Nobia was once again affected by concerns regarding the company's UK operations considering the outcome of the parliamentary elections.

Skanska was a new holding, while the holdings in Ericsson, Electrolux and StoraEnso were reduced.

Central bank expansionary monetary policies have, to some extent, led to real economic improvements. Above all, consumption has been stimulated while the willingness for corporate investments remains limited - although this is increasing. However, following the US presidential election, equity market developments indicate expectations of a significant increase in the willingness to invest. According to our estimates expectations have rallied a little too much, and we therefore reduced our exposure to economically sensitive shares.

Performance for the month

Performance year-to-date

Performance, %	Lannebo Sverige	Benchmark
June 2017	-2.5	-2.0
Year-to-date 2017	10.6	10.8
3 years	45.0	42.0
5 years	134.8	117.4
10 years	116.2	104.2
Since inception (08/04/2000)	373.0	248.6
Average annual return 24 months	10.4	10.4

Monthly performance, %

Jan	Feb	Mar	Apr	May	Jun
1.0	2.5	3.0	3.7	2.7	-2.5
Jul	Aug	Sep	Oct	Nov	Dec

Annual performance, %	Lannebo Sverige*	Benchmark
2016	11.0	9.6

Explanations

Benchmark	SIX Portfolio Return Index. The unit price of the fund is set before the price of the index is calculated. This can sometimes result in a misleading comparison between the two.
Sharpe ratio	A measure of the fund's return taking into account the total risk the fund has had during the period. Calculated as the ratio between the fund's return minus the risk-free rate of return and the fund's total risk (standard deviation). The information is based on monthly data and relates to the latest 24 months.
Total risk	Given as the standard deviation of variations in the total return of the fund or index. The information is based on monthly data and relates to the latest 24 months.
Tracking error	A measure that describes how closely the performance of the fund tracks the performance of the benchmark index. Calculated as the standard deviation of the difference between the return on the fund and a benchmark index. The information is based on monthly data and relates to the latest 24 months.
Information ratio	A measure of risk-adjusted return. This is measured as the active return divided by the portfolio's active risk. The information is based on monthly data and relates to the latest 24 months.
Alpha	Describes the effect of the portfolio manager's decisions on the return of the fund. A positive alpha value is the extra return which an investor receives for having taken greater risks than the market. The information is based on monthly data and relates to the latest 24 months.
Beta	Describes the sensitivity of the fund's value to changes in the market's value. The beta value reports how much the fund's value changes in percentage terms when the market's value changes by one percentage point. The information is based on monthly data and relates to the latest 24 months.
Active share	A measure of the proportion of the portfolio that differ from the benchmark.
