

**Risk information:** Past returns are no guarantee of future returns. The money invested in the fund may increase or decrease in value and it is not certain that you will get back all the capital you have invested. The key investor information document and prospectus can be found at [www.lannebo.se](http://www.lannebo.se). Please note that Lannebo Fonder does not produce investment recommendations or other information recommending or suggesting an investment strategy. Information in this monthly report should not be seen as anything other than a statement of the fund's trading activities and holdings.

### The fund's investment policy

Lannebo High Yield Allocation is an actively managed fixed income fund that primarily invests in high yield corporate bonds predominantly from issuers in the Nordic region. High-yield bonds are securities issued by companies with a lower credit rating. The average maturity of the fund's holdings is 3-5 years, but may at times deviate from this range. Investments in foreign currency are always hedged.

### The fund is suitable for those who:

- want a higher return than traditional fixed income funds and who are willing to take on a slightly higher risk
- want an actively managed fund where a thorough company analysis creates long-term returns
- want a well-diversified fund of corporate bonds

### Fund manager comment

Lannebo High Yield Allocation increased by 0.7 per cent in April and has increased 2.2 per cent so far this year. The Nordic credit markets continued to build on the positive gains from the beginning of the year. The appetite for risk was high and market activity was good in both the primary and secondary markets.

Swedish long-term interest rates continued to decrease in April. The Swedish 5-year government bond yield decreased from -0.24 per cent to -0.30 per cent. During the month the 3-month Stibor once again went to negative territory falling from +0.01 per cent to -0.06 per cent. The fund has a low interest rate duration, which means that a change in the long-term interest rate has no major impact on the fund.

As expected, the Riksbank in their April meeting left the repo rate unchanged at -0.25 per cent. The bank signaled that the next increase will take place somewhat later than previously estimated. Swedish economic activity continued to be high and inflation is near the 2 per cent target; however, the bank estimates that inflationary pressures going forward will be somewhat weaker than previously expected. The bank will also continue to buy back government bonds through December 2020.

Credit duration, the average maturity of all the holdings in the fund, increased to 2.4 years. The interest rate duration, measured as the average interest period, was 0.3 years. The share of corporate bonds consists mainly of FRN-loans, which are bonds with a variable interest rate.

The continued strategy of the fund is to maintain a low interest rate risk to protect the fund against rising interest rates. The fund hedges all foreign currency exposure to Swedish krona.

The first of the quarterly earnings reports were published during the month where results were as expected from a credit perspective. The fund participated in a new issue by Länsförsäkringar that issued a subordinated bond, a so-called ATI bond, with the right to redemption in 5.5 years. The fund also bought bonds in Kotkamills, a Finnish paper mill founded in 1872. Finnish Forchem, a major holding, announced they would redeem their bonds early with a premium. The fund divested its entire holdings in Storebrand, AkerBP and Finnair.

The largest issues at the end of the month were Cibus Nordic Real Estate, Hexagon Composites, Containerships, Ocean Yield and SEB.

### Monthly performance
